

How to create Wordpress Child Theme

Go to this folder

`\htdocs\bst\wp-content\themes`

Then Create new folder of child theme for example **theme-name-child**

Then create **style.css** and **functions.php** file inside the child theme

Add below code on the style.css file (**Copy below Code form the parent theme style.css file**)

`\htdocs\bst\wp-content\themes\Divi` (Divi is theme Name)

`/*!`

Theme Name: Divi Child `// Change Divi Child with the your child theme name`

Theme URI: <http://www.elegantthemes.com/gallery/divi/>

Version: 4.17.4

Description: Smart. Flexible. Beautiful. Divi is the most powerful theme in our collection.

Author: Elegant Themes

Template: Divi `// Add this row and replace Divi with the you parent theme name`

Author URI: <http://www.elegantthemes.com>

License: GNU General Public License v2

License URI: <http://www.gnu.org/licenses/gpl-2.0.html>

`*/`

Then copy **screenshot.jpg** file from the parent theme and add in child theme

Just add `<?php` to the **functions.php** file

Then Activate Child theme and change style and functions in child theme
